

What are seamless climate predictions?

Imagine a beautiful scene in the mountains...

You want to take a picture of the scene. Adjusting the depth of field of your camera changes what is seen in focus.

Either the **flowers** are in focus with a short depth of field...

or the **flowers and house** are in focus...

or the **whole scene** is in focus with a longer dept of field.

And now think about climate predictions...

Flowers
Seasonal climate predictions
(2-6 MONTHS)

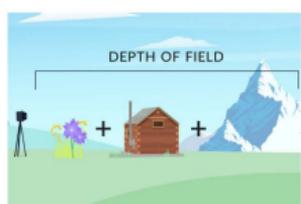

House
Decadal climate predictions
(2-10 YEARS)

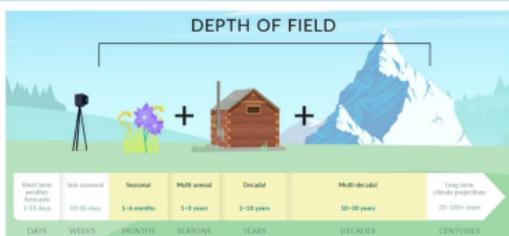

Mountain
Climate projections
(30+ YEARS)

Different communities work in silos with different types of **forecasts** at different **timescales**. But achieving a resilient society needs to consider **all** timescales.

Much like a camera when increasing the depth of field...

Seamless climate predictions focus on all the elements at once and fill the gaps of information... showing us the **full picture**.
